

Would you like to do this topic again in a different object? 17 - yes 4 - no 2 - no response

- * Just make the scope smaller with exact requirements.
- * More SolidWorks orientated.
- * Flashlight or other simple product due to time limitation.
- * More design oriented and less project management.
- * The topic was so broad it could apply to EVERY object.
- * Talk more about using SolidWorks capabilities in designing and subassemblies.
- * More focused goals.
- * Less questions; remind them of analogies to real life projects - discovery phase, concept phase, design phase
- * More design focus - to provide alternate design ideas.
- * Rules need to be more specific and simplified.
- * More specific - I did not get it until the time was up.
- * Better definition and scope of task.

What would you like to see at our next meeting (circle all that apply)? These are the comments:

- * I would like to hear about what hasn't worked.
- * New Photoworks
- * Need to mix what we did this time, neat models, and tips & tricks. Do them all sequentially.
- * Use of SolidWorks to help project/time management.
- * Do some SolidWorks.
- * Smartmates

Do you have any suggestions to improve the meetings?

- * When you break into groups, make them small, otherwise some people just sit there.
- * More SolidWorks orientated, but I like the interaction with members.
- * Half time like this meeting, other half tips and tricks.
- * Provide a mix of activities and presentations.
- * Talk more about the SolidWorks capabilities that help time management.
- * Provide streamlined topics with one defined goal.
- * Do something with SolidWorks
- * Having meetings in the universities. (We move the meetings every month. The summer meeting has typically been held at UW.)
- * I think we should have focused more on SolidWorks, not enough time to get to that point though. It was easy to get off topic and talk about things that are really company procedure rather than SolidWorks.
- * Talk about SolidWorks issues.
- * I don't think you can redo this topic, but rather you have to pick one area of this last meeting and expand on it.

Any other general comments?

- * The structure was well planned and I was very impressed how well you stuck to it.
- * Thanks
- * I found this meeting very helpful towards a better understanding of SolidWorks in a business environment.
- * Interesting format. This has good potential. Limit scopes more to allow more detailed thoughts.
- * Promote the group through VAR's and SolidWorks Corp.
- * I enjoyed it.

Of the responses,:

Repeat this format - 10

Show and Tell - 16

Tips and Tricks - 14

Break Out Discussions - 12

Third Party - 1

Add Ins - 1

We are going to combine the first 3 at our next meeting.
